

# RENAISSANCE

## Special Features

Renaissance Casement windows have many valuable features. The fusion-welded sash and frame corners provide leak-free performance and durability. For added tightness and securities, our multi-point locking mechanism utilizes one lock to secure the window in several places. Our Renaissance windows open a full 90° for maximum air flow and easy cleaning from inside your home. Each casement sash includes 7/8" thick insulated glass with Warm Edge Technology. The advanced weather stripping and exterior sash seal combine to make our casements weather tight.

From back in the Renaissance days to our most modern homes, casement windows add a look that is right at home in a wide variety of architectural styles. Casements are the most popular window style on the market. Our Renaissance casement windows are unique and in a class of their own.

# Renaissance Casement Windows

Masterframe Corners

Shown here is the welding process for Renaissance casement windows. In step 1, the lineals are placed in special dies that square off the extrusions to enter the welding chambers. Once tight and square, they are separated. In step 2, a 480° hot plate erects from the machine to heat up the ends of the extrusions. After about 30 seconds, the hot plate reaches the correct temperature and falls below. In step 3, after the hot plate falls below, the two heated ends come together, take hold of each other while cooling and create the ultimate weld.
